

HYYP SMART SOLUTIONS

HYYP is our range of smart GSM and IP devices that enables full control of the home or business via our **HYYP** smart phone App. **HYYP** offers users complete overview of their IDS alarm system with push notifications, automation control, live video, and video verification.

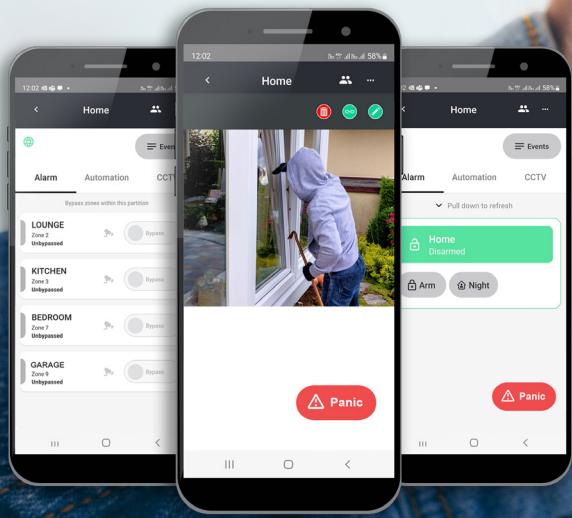

The **HYYP** communicator offers real time, secure and reliable messaging through to professional monitoring centres.

- Arm / disarm / stay arm
- Zone bypass
- On screen panic button
- Multiple partition control
- Multiple site control
- User management
- Instant push notifications
- Wired or wireless automation control
- Video verification
- Personalised company site logos

HYYP Video verification

HYYP

Available on Google Play

Available on App Store

Available on AppGallery

View, receive and review live video and events for effective site management and alarm verification.

Using the HYYP module with any of these three network connected CCTV systems, **20-seconds** of video footage can be retrieved (10 seconds pre-alarm) by tapping the camera icon on the notifications screen.

With an internet connected CCTV system and an IDS alarm panel, adding a **HYYP Communicator** makes all these features available.

To set up, simply scan the **QR code** and link the alarm zones and video channels. When the alarm activates, the linked video feed will be available via HYYP notifications.

Once the CCTV system is connected to the internet **no additional cabling** is required, as the link between the DVR and HYYP is virtual.

IN PARTNERSHIP WITH

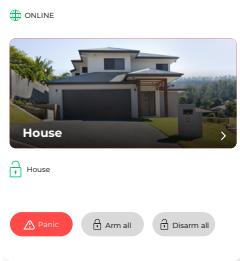

XSERIES

Part of **Yale**

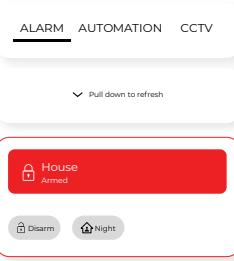

Africa's leading manufacturer and distributor of electronic security products.

HYYP Features

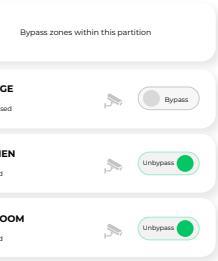

Multiple site control

View and control multiple sites from one App

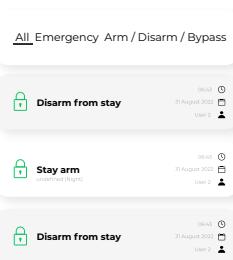

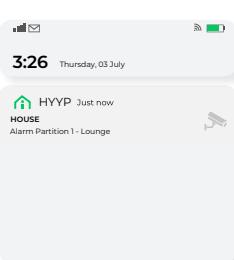

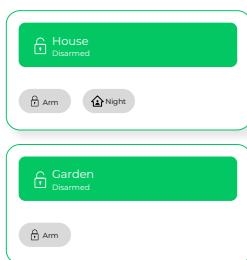

Control

Arm / disarm / stay arm

Bypass zones

Bypass and un-bypass zones

Partition control

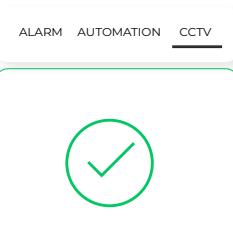

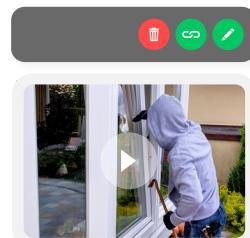

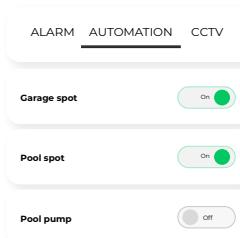

Multiple partition control

Push notifications

Receive push notifications from alarm activations

Notifications

Audit trail of all alarm panel events

Automation control

Activate wired or wireless outputs for any automation requirements.

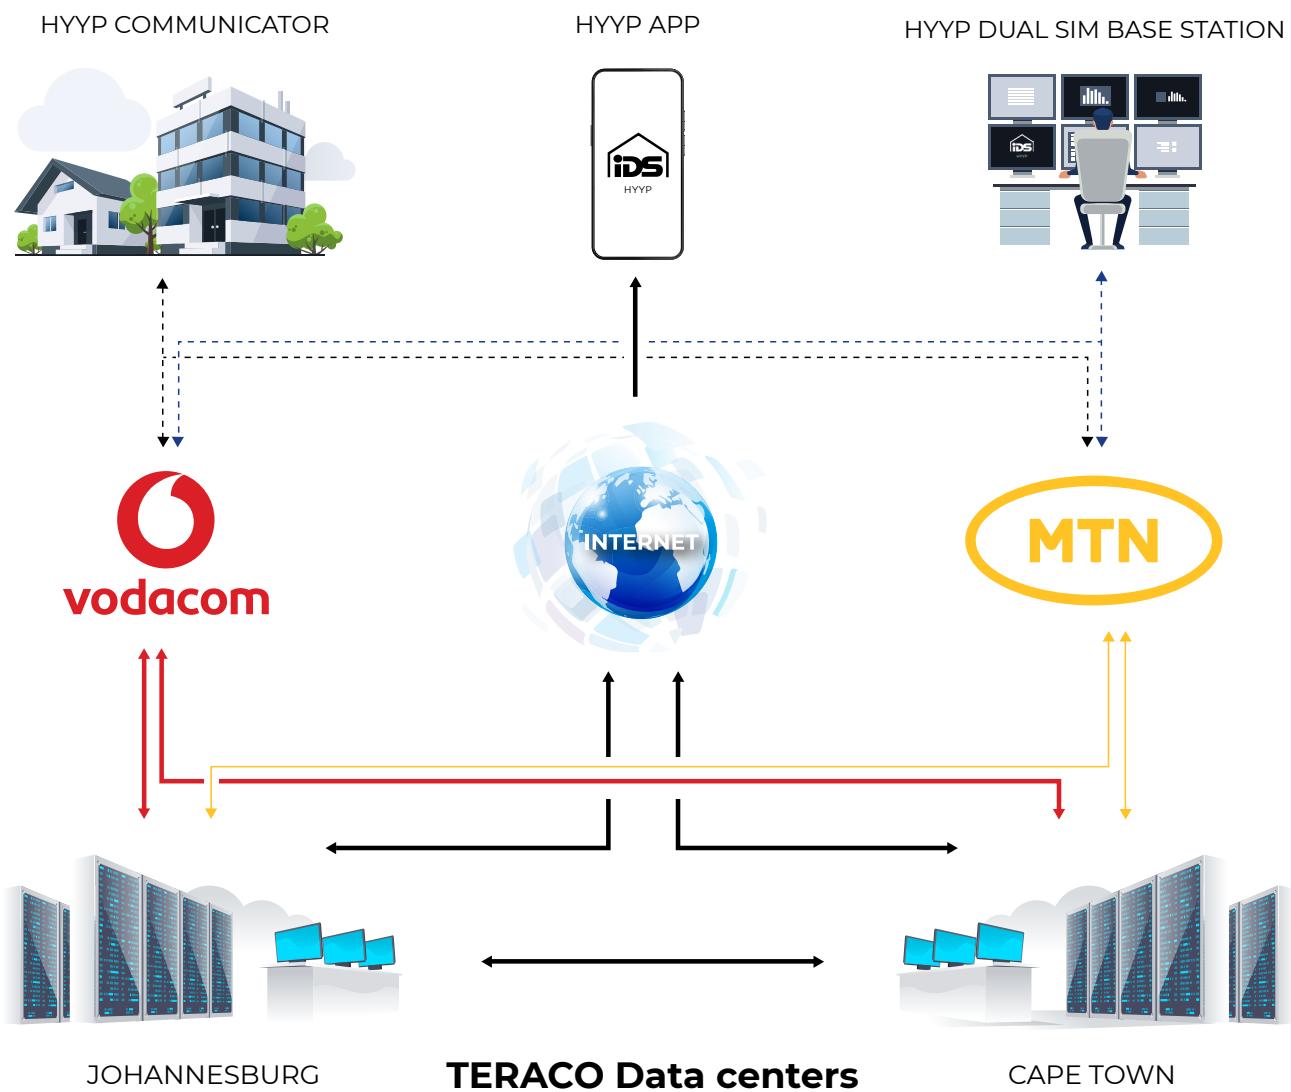

Video integration

Live video and event verification

Control room contact

Call the Monitoring Centre directly from the App

HYYP Platform architecture overview

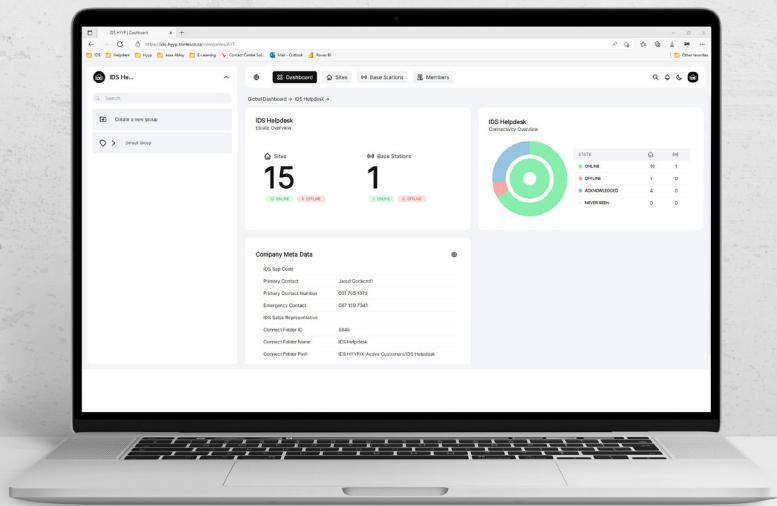

Full redundancy of all aspects, allowing real time bi-directional monitoring of HYYP modules and base stations.

Part of Yale

HYYP Module solution

HYYP GSM Solutions make use of a smart single GDSP SIM card that automatically switches to a secondary network when the primary network is unavailable.

- Contract required for App and monitoring centre reporting
- Pre-paid options available for App usage only
- Automatic time updates for event log accuracy

MODULES**HYYP Plug on module**

860-684-001

- Plugs directly onto the IDS 806 & XSeries serial
- GSM communication
- App support

HYYP Alert module

860-614-001

- Reports Contact ID from 3rd party alarm systems
- Connection via dialler or I/Os
- GSM communication - no App

HYYP Serial module

860-616-001

- Connects via serial port of the IDS alarm panel
- GSM communication
- App support

HYYP IP / Wi-Fi module

860-36-0693

- Connects to local Internet
- No monthly subscription for App
- WPS Router required

MODEM**HYYP Modem**

860-540-003-1

- GSM programming of IDS control panels connected to HYYP
- Remote event log access
- Secure encryption providing high security

DUAL SIM**Dual SIM base station**

860-540-008

- Required for central monitoring stations
- Dual SIM cards with 2/3/4G capability
- Connection to 3rd party monitoring software via RS232 cable.
